Cybercom wins telecom outsourcing project to be located in Poland

Cybercom expands its partnership with one of the world's leading wireless semiconductor and platform companies to include interoperability field tests for network signalling. The project will be placed in Poland and about 15 consultants will be involved.

"We are thrilled that one of the world's leading companies in this area is entrusting us with these important field tests," says Mats Petersen, account manager at Cybercom. "We have good expertise in Poland's network environment. The operators used various suppliers for their network infrastructure, which makes Poland an especially appropriate place for this type of advanced field testing."

Cybercom will test the connection and disconnection of various types of data traffic for mobile platforms. In connection with the deal, Cybercom agreed to take over some employees from the leading Swedish telecom company that previously handled these field tests for the customer.

"The assignment is done according to Cybercom's global sourcing business model, that is highly appreciated by our customers. We are very pleased that again we could provide a win-win solution for all parties involved and we welcome our new employees who will ensure the quality of our deliveries," says Piotr Ciski, managing director of Cybercom Poland.
