## Tilgin wins new order for Gigabit IP technology from Bredbånd Nord in Denmark

**Stockholm, Sweden, October 15, 2009:** Tilgin, a leading provider of solutions for multiplay and next-generation broadband services, has won the first order for products and software from Bredbånd Nord, a leading Danish Fiber Operator. This is the first order for Tilgin's latest Gigabit Home Gateways and it will enable Bredbånd Nord to offer unrivalled performance to its end users.

The order value of this initial order is approximately SEK 2 million.

"Bredbånd Nord is a high profile broadband operator devoted to delivering virtually unlimited bandwidth to its subscribers. This new order once again proves the cutting edge performance of our software and solutions and that we meet the most advanced market requirements," says Ola Berglund, CEO of Tilgin.

Bredbånd Nord will introduce Tilgin's Full Service Routing solution for Triple Play, based on Tilgin's Home Gateway HG1300 for Gigabit access together with the Home Gateway Software HGA 570 and Tilgin's ACS, the Remote Management Software VCM 5, to fiber connected households in Denmark.

Tilgin develops high performance solutions for next generation broadband networks. They support superior quality delivery of high-speed Internet, telephony, and television services. The solutions also include auto-provisioning using the standard TR-069 with rich possibilities for operators to remotely manage all home gateways and other connected home devices, e.g. different IPTV Set-Top-Boxes.

Tilgin's Full Service Routing solution is developed to further enhance IPTV services from broadband operators, among others. It allows for HDTV with multiple video streams in parallel, as well as communication between different devices in the home.

This new order confirms Tilgin's leadership within residential solutions for the Next Generation Broadband Access Networks and it also clearly shows that the market now is going for Gigabit access capable solutions for the residential market.
