

Tilgin receives volume order for VDSL Home Gateways from wilhelm.tel in Germany

Stockholm, Sweden, November 16, 2010: Tilgin, a leading provider of solutions for multiplay and next-generation broadband access, has received an initial order from the German triple play provider wilhelm.tel to provide VDSL Home gateways and remote management solutions to the city of Norderstedt, Hamburg and the surrounding areas' fiber broadband pnetwork (FTTH).

Tilgin will provide its ISDN version of the HG1213i VDSL Home Gateway and Remote Management System, VCM, for use in the wilhelm.tel network. The initial order is for 2,500 homes, and delivery is planned already in late November of this year.

wilhelm.tel is part of the Stadtwerke Norderstedt, a publicly owned utility company providing gas, water, electrical power, district heating and regional public transportation to consumers in the Hamburg region. Additionally, wilhelm.tel is considered to be one of Germany's leading broadband operators, and Tilgin has been providing its Home gateway solutions since collaboration started in 2007. This new order enables wilhelm.tel to leverage an already existing infrastructure in the region to further offer internet access and IP-telephony services.

"This deal represents an important step in our continued expansion into Germany, and it clearly demonstrates the demand for reliable next generation products and services in the German market, where quality is critical," comments Mats Victorin, CEO at Tilgin. "We are one of very few companies able to offer a carrier-grade solution for operators looking to deploy an extended portfolio of next-generation services, and we expect to see this demand continue to grow as the industry moves forward."
