

## Press release

June 30, 2010

# op5 and City Cloud introducing Monitoring in the Cloud

*op5 is the leading provider of [monitoring software](#) in Europe. op5 uses Open Source and their monitoring services are now available in the Cloud via City Cloud, a cloud computing service from City Network. By introducing monitoring in a new business model, customers are now able to get professional monitoring in the Cloud which is both more cost-efficient and flexible.*

By providing monitoring in the cloud op5 are able to give their existing customers an external solution to monitor their web based services, regardless if they are inside or outside the cloud. This gives the customer the ability to measure and control the user experience in a specific service. City Network also benefits from the introduction of op5 Cloud Monitor. The 500 customers using City Cloud can now create servers with the sole purpose of monitoring their virtual machines directly through the service provided by op5.

- The fact that op5 introduces their external monitoring services in the cloud using City Cloud is a great acknowledgment, not only for City Cloud but also for cloud computing in general. It's the beginning of a new era where both small and enterprise companies can benefit from the cloud and services within the cloud says Johan Christenson, Chairman at City Cloud.

- Being the leading provider in any field means that you always need to be innovative both with your products and your business models. Providing our monitoring service in City Cloud is a natural step for us and creates great advantages for our customers. More flexible, installed and ready within 15 minutes and cost efficient are the key ingredients that we think makes this solution suitable for everyone in need of professional monitoring says Jan Josephson, CEO at op5.

### About City Network

With more than 10 000 customers in Scandinavia City Network is one of the leading hosting providers in northern Europe. City Network is the only Scandinavian hosting provider to offer a full service menu of hosting related services such as shared hosting to dedicated servers to cloud computing. In addition City Network is a registrar of many top level domains and offer a full suite of domain services. Box Hosting, [onlinebackup.se](#) is brands owned by City Network.
