Dimension creates new server solution for Bingolotto

Swedish-based Interactive Gaming Systems, IGS, produces a number of successful interactive entertainment concepts for television and the Internet, including Bingolotto, the country's largest lottery. To help it centralize the administration of its Swedish lotteries, IGS has chosen a solution from the integrator Dimension.

As it develops and expands its product range, IGS is attracting a growing number of users. Previously, local administration for sales, prizes, etc. was handled through a network of local computer systems. In an effort to improve efficiency and quality assurance, IGS is now centralizing its operations with a server solution designed, delivered and implemented by Dimension, which is also responsible for service and support. Moreover, Dimension is serving as project manager.

"The development and growth of the gaming market is placing totally new demands on availability, security and scalability as the number of users increases and solutions tend to be more interactive," says Sven Uthorn, Managing Director of Dimension AB. "Now that it has decided to centralize its lottery administration, IGS will not only improve its cost efficiency, but also benefit from a highly secure, stable system."

IGS is a cutting-edge player in the development of new lotteries and games, including via the Internet and SMS mobile phone text messaging service. In addition to Bingolotto, a combination of bingo game, lottery and TV show that attracts the country's highest Saturday evening ratings, IGS produces the auto show "Motorjournalen," the entertainment show "Sommarnöjet," scratch-off games and Christmas calendars, among other things.
