

PRESS RELEASE FROM SCRIBONA AB

December 11, 1998

Scribona raises profit forecast for 1998

Scribona's sales development during the fourth quarter was stronger than expected, particularly for PC products. The introduction of a new strategy and a new organization in the computer distribution division, Scribona Computer Products, has positively affected sales and above all the gross margin, and is contributing to a significant boost in income for the division.

The Group's income after net financial items, excluding gains on the sale of units, for the full year 1998 is therefore expected to be in the range of MSEK 140-150 (86), compared with the previous forecast of around MSEK 120.

Örjan Håkanson
President and CEO
