HiQ signs frame agreement with 3GIS and works on 3G network design

HiQ has signed a frame agreement with the network operator 3GIS. The agreement covers consulting services within network design and management.

"HiQ is working with 3GIS on 3G radio and transmission network design" says Patrik Boman, Managing Director of HiQ Data. "HiQ has worked with network design for both fixed and mobile telephony for several years."

3GIS is a network operator owned in equal parts by Europolitan and Hi3G. 3GIS works with ensuring that its owners have cost-efficient network coverage and capacity in compliance with their needs.

"3GIS is a new, interesting customer for HiQ. As the technology develops, new constellations are created that help to improve cost efficiency, capacity and quality. This increases the possibility of effective roll-out of networks and services," says Lars Stugemo, CEO of HiQ International.

"Our considerable experience in communications enables us to help our customers transform technology into profitable business solutions. Profitability and high quality are top priorities – both for our customers and for HiQ," concludes Stugemo.
