### **VOLVO AERO TURBINES (UK) SIGNS GAS TURBINE AGREEMENT WITH HONEYWELL CONTROL SYSTEMS**

**Volvo Aero Turbines (UK) Ltd. has signed a Memorandum of Understanding (MoU) with Honeywell Control Systems Ltd.**

The agreement makes Volvo Aero Honeywell's preferred supplier particularly when it comes to gas turbine installations in the UK healthcare market. The main area of business concerned is Combined Heat and Power (CHP) plants that supply hospitals in the UK with both heat and electric power. Other markets could be involved in the future.

The first contract signed under this MoU concerns the installation of Volvo Aero's CHP unit, the VT600, at a hospital in Wales. A second contract concerns a similar plant at a hospital in England.

Honeywell Control Systems offers its customers "Contract Energy Management", which means they only pay for the electricity supplied; the heat is free of charge.

Honeywell's orders from hospitals in the UK include numerous energy-saving measures in which Volvo Aero's CHP facilities play an important role.

In other contexts, in a power range of 600 kW to 5 MW, Volvo Aero can supply similar contracts which also will include full customer support and financing in cooperation with the finance company Volvo Contract Services in the UK.
