Tele2 selects Aptilo's solution for broadband services in Finland and Sweden

Aptilo Networks delivers the service management platform to Tele2 wireless broadband services.

Tele2, the leading alternative pan-European telecommunications company, uses the Aptilo Hotspot platform for their broadband services for the residential and enterprise market in Finland and the city of Norrköping in Sweden. The management platform from Aptilo is used for access and service control of the broadband services.

“We are obviously very proud at Aptilo Networks to have been selected by Tele2 and being part of their service launch. This proves the versatility of the Aptilo platform not only as the market leading platform in the public hotspot market but also most suitable for access technology independent broadband services.” says Torbjörn Wård, CEO of Aptilo Networks.

About Aptilo Networks

APTILO NETWORKS develops and provides system solutions and services to operators and venue owners of public wireless and wired hotspot services. Aptilo's suite of solution offers operators a convenient and effective way to integrate wireless access points and wired connections in an advanced public hot spot environments. The Aptilo platform enables e.g. payment via service subscription, credit cards, vouchers and integration with mobile operators to pay with mobile phone subscriptions and other payment enablers.

The company is Stockholm-based, with a regional office for Asia-Pacific in Kuala Lumpur, Malaysia.
