

Nexus Receives Order from CertEurope in France and Starts a Strategic Partnership in the Digital ID Market

Nexus has received an order for Certificate Manager from CertEurope in France. CertEurope is a leading Trusted Third Party providing digital ID solutions for the legal and insurance market sectors. The order marks a breakthrough for Nexus in the French market.

In order to support its growth on the French market, CertEurope – one of the main TTPs in France - has decided to choose Nexus' PKI solutions to build all the new secured platforms for their customers.

CertEurope will install Nexus' PKI solutions in order to operate all the new Certification Authorities and secured solutions for their customers in the French market.

In addition, CertEurope and Nexus signs a strategic partnership agreement. This partnership aims at offering secured solutions based on Nexus' digital identity technology for the corporate market, public sector and local authorities.

“This is a very encouraging deal for Nexus. The digital ID market in France is known to be very competitive and we see this as a real breakthrough for Nexus”, said Gustaf Malmros, VP and Business Area Manager, Nexus Secured Business Solutions.

About Nexus Digital Identities and Signatures

Digital identification and signatures are used to fulfil requirements for the confidentiality, traceability, accuracy, and availability of information distributed via digital media.

Digital identities and signatures also ensure that the right users have access to the right information, and that unauthorised users are denied access.

Demands on security levels for access control vary and can be solved using different technologies. But if access control is to be combined with traceability in the form of digital signatures, then Public Key Infrastructure (PKI) is the technology that meets all requirements.

PKI is a method used for digital IDs and signatures. It is based on a pair of keys, one private and one public, used for digital identification, signing and encryption.

Nexus participated in pilot projects that formed the base of digital identification solutions used by the Swedish National Tax Board (Riksskatteverket), the Swedish National Social Insurance Board (Riksförsäkringsverket), and the Bank ID Service.

Nexus is one of the leading companies in this field in Europe.

About Nexus Secured Business Solutions

Within the field of secured IT solutions, Nexus has gathered expertise in business and operations systems, PKI-based solutions, and secured messaging.

Through the combination of our expertise and experience in secured solutions for electronic business transactions, electronic services, message management, and electronic IDs, we have a unique ability to create the right security solutions based on our clients' needs.

We deliver secured solutions within the following areas: Digital Identities, Digital Signatures, Identity Management, and Secured Messaging.

About CertEurope

CertEurope is one of the main TTPs in France. CertEurope is specialized in building and delivering trusted applications (digital signatures, secured authentication) for legally regulated professions (clerks of court, lawyers, accountants, legal experts, etc.) and corporate enterprises.

CertEurope addresses contemporary issues linked to the use of Internet growth:

- Digital certification of dematerialization documents.
- Secured archiving in accordance with legal obligations.
- Time stamping and information traceability.
- Any other legal security issues related to dematerialization.

CertEurope has three main areas of activity: Trusted Provider, Certification Authority, and Secured Solutions.
