

MultiQ expands in the Nordic market.

MultiQ has received orders worth SEK 10 million for 1,500 monitors.

MultiQ, the Swedish manufacturer of flat monitors, has received four large orders in Norway totaling 1,500 monitors and a value of SEK 10 million. The employees of Christiania Bank og Kreditkasse, Den Norske Bank, TV2 and the Technical University of Norway (NTNU) have chosen MultiQ's monitors for the home computers that they purchase through their employers. The monitors will be delivered during the second half of the year.

The orders are a result of MultiQ's determined, long-term strategy of being able to customize flat monitors even in very small series. In doing so, the company has seized the initiative in a new, rapidly growing market segment. A fresh design concept will be launched during the Connect trade show that opens this coming Monday at the Stockholm International Fair.

All of MultiQ's flat monitors are exceptionally sturdy. As a result, they are perfectly suitable for checkout lines, production sites, and public settings. Part of the unique and powerful concept is the ability of businesses to adapt MultiQ's products to their own logo, design, and colors.
