

Sigma launches new broadband solution that offers business value to companies and organizations

In the next few days, Sigma is launching its new 1NET4U service, a network solution that offers companies and organizations completely new opportunities for total communications. The concept is being presented at Networks Telecom 2000 in Stockholm on September 20-22.

The service was developed by Sigma Måldata Network Solutions, a company in Sigma's E-solutions business area. The concept focuses on companies and organizations and includes the offering of a wide range of advanced IT services, supported by high-speed transmission and broadband technology. For the first time, the stated focus is on the needs of the environments in which the technology will be used and on the business value that broadband solutions can offer to a user company's operations.

1NET4U brings order to what has, to date, often been a complex IT environment, by making the services available in, for example, conference rooms, office workplaces and hotel rooms. The actual services being offered include ASP, hosting, remote operation and monitoring. The concept also enables other players to deliver services to the network, to which companies connected to 1NET4U will have access. For example, a supplier of business systems could put its system up on the Net and make it available to those companies that elect to subscribe to a specific service.

The underlying platform, 1NET4U, provides access to the Internet, corporate VPN and functions for traditional telephony and data telephony.

1NET4U also serves as an excellent tool for linking a user company to, for example, customers, business partners, suppliers and haulage firms.

Sigma is a leading supplier of consulting services in the areas of e-solutions, embedded solutions and engineering solutions. The Group, which has some 3,000 employees in 11 countries, focuses on solutions for interaction, innovation and integration. Sigmas guiding principle is to strengthen its customers competitiveness and brands. (www.sigma.se)
