

AU-SYSTEM LAUNCHES WAP 1.2 COMPLIANT WAP BROWSER.

GSM World Congress, CANNES, FRANCE, February 2., 2000 - AU-System AB announced today a WAP 1.2 compliant version of the company's WAP Browser. The release makes it possible for handheld terminal suppliers to immediately offer WAP 1.2 functionality with the benefit of a customised look-and-feel. The browser embraces a broad range of features such as WTLS and WTA.

The WAP Browser is based on a generic component design, making it easy to adapt to different types of wireless terminals for all major digital transmission standards, mobile handsets, PDAs, and other handheld devices. It is equally flexible when working with multiple operating environments. AU-System currently offers adapted versions for Windows CE, Palm OS and EPOC as well as various embedded systems.

About AU-System

Founded in 1974, AU-System quickly established itself as Sweden's first software specialist in the area of data communications. Today, AU-System remains Sweden's largest independent consulting company within the networking field, with more than 630 employees. The company was presented with the prestigious industry award IT Company of the Year, 1999, by the Swedish business magazine Veckans Affärer. AU-System offer world class wireless software solutions and advanced consulting services, including integration and development projects, business development, and advisory services. Key customers include MeritaNordbanken, Telia, Singtel and Ericsson. For more information, please visit the AU-System Web site at www.ausystem.com.
