

Frontec signs a group framework agreement with Ericsson

The new framework agreement covers consultancy services and development assignments, strengthening Frontec's role as one of the leading consultancy companies for the telecommunications industry.

Frontec Teknik focuses its activities on intelligent communication, and is a long-standing developer of hi-tech products for leading industrial companies. The collaboration with Ericsson is being conducted within the scope of Frontec's unique expertise in fields such as product and systems development in embedded systems, technical systems development in areas such as AXE and ASIC (highly-integrated special loops), the development of testing and verification systems, and mechanical design and analysis.

Frontec's expertise in embedded systems for e-commerce, mobile Internet connectivity, advanced telephony and intelligent home and vehicle systems has contributed to the company becoming the only IT consultancy to have framework agreements with both Volvo IT and Ericsson, and being an accredited Bluetooth Solution Provider.

Frontec in brief

Frontec is a consultancy company in the areas of e-business and Intelligent communication, and is listed on the Stock Exchange O list. The company's business idea is to make our customers' business processes and projects more efficient and to shorten lead times. Customers can be found among Scandinavia's largest companies and organisations within the fields of telecommunications, manufacturing, public administration, trade and transport. The Frontec group includes Frontec Maintenance Systems (FMS), which develops and sells maintenance systems and the part owned subsidiary company Viewlocity, supplier of the software product AMTrix for application integration (EAI) with its head office in the USA. Frontec has approximately 1400 employees with 30 offices in 12 countries.
