Cooperation on contaminated land

The Scancem company Reci Industri and Aurex AB have formed a 50/50 joint venture for after-treatment of contaminated land. The companies' know-how represent a wide range of techniques and equipment for land cleanup.

- The Swedish market is rather undeveloped in this sector, comments Aurex President Tore Hallberg. But the cost for after-treatment of contaminated land in Sweden has been calculated to be at least SEK 30 billion.

Reci Industri takes care of industrial and chemical waste. In addition to operations in the environmental fields, Aurex is also active in goldmining in Ghana.
