## **Enea OSE Systems Receives Bluetooth™ Order**

*A Brand New World to use Bluetooth™ HOST stack with OSE for wireless LAN*

Enea OSE Systems has received an order for the Bluetooth HOST Stack and OSE™ Realtime Operating System (RTOS) from the mobile Internet company A Brand New World, formerly called Radio Design. The first delivery will be made on September 20, 2000.

A Brand New World specializes in developing solutions for the mobile Internet, mobile radio systems and datacommunications markets. The OSE RTOS and Bluetooth HOST Stack will be used in the company's new product for wireless local area networks (LAN).

"A Brand New World creates the optimum conditions for unlimited wireless communication ", said Paul Krüger, President & CEO, A Brand New World. "The OSE RTOS, which is optimized for wireless applications, has provided the ideal combination of performance, reliability and small size for the wireless LAN application we are developing."

"The combination of the OSE RTOS and the Bluetooth HOST Stack as an integrated package will significantly accelerate our application development", said Anders Österberg, Director, Research & Development, A Brand New World.

The sale of OSE with the Bluetooth HOST Stack confirms the company's predictions about Bluetooth development gaining momentum during the second half of 2000.

"While Bluetooth has generated a great deal of excitement in the embedded development world, this is a landmark moment when we see the excitement and interest translated into actual product development", said Robert Largren, VP Marketing, Enea OSE Systems.

## **About A Brand New World**

A Brand New World in Sweden AB (publ.) (formerly Radio Design) is a knowledge company that develops solutions within the spheres of mobile Internet, mobile radio systems and data communication.
