

TietoEnator forms two new competence companies

TietoEnator Test Solutions focuses on tests and TietoEnator ETech on electronics development

TietoEnator focuses on spearhead competence and now starts two new competence companies, TietoEnator Test Solutions and TietoEnator ETech. The companies are based in Kista and are included in TietoEnator Technical Consultants where some 400 consultants work with the development of built-in systems.

"When we pool competence in specialized companies we can offer our customers a more distinct range of services at the same time as we create scope for growth in new areas", says Carl-Harald Andersson, MD of TietoEnator Technical Consultants.

Methods and mentors

TietoEnator Test Solutions offers a comprehensive range of services within test and integration. The company offers TietoEnator's test methods PTM (Practical Test Method) and TAKS (Test of Complex Systems), and consultants who can take on all the roles in a test project. The company has several consultants with long experience who can act as mentors in the customer's projects. TietoEnator Test Solutions' services are in great demand.

"In these times of rapid technical development, it is becoming all the more important to carry out tests on products to prevent the risk of deficient products being available on the market", says Thomas Klarbrant, MD of TietoEnator Test Solutions. TietoEnator Test Solutions also has specialist competence directed towards customers who work with e-commerce and Internet solutions.

"We have gained valuable knowledge from the work with our established customers – knowledge that we can now apply to less mature customers. The result is great improvements with relatively small means", says Thomas Klarbrant.

Unique focus on electronics construction

TietoEnator ETech is a new company within TietoEnator with a focus on electronics construction. The company has a large technical breadth within product development, with experienced consultants who work with everything from mobile telephones to satellites.

"This is a rapidly expanding area, not in the least when considering the development in the telecom branch", says Per-Göran Eriksson, MD of TietoEnator ETech. "Our services are in great demand and we have expanded considerably during the year. Most of the companies in our branch have their own niches, while we have chosen to invest in a comprehensive range of services", Per-Göran Eriksson concludes.
