

## **GIPS VoiceEngine Mobile™ now available for Symbian OS v9**

*Global IP Solutions now on 85% of smartphones*

**Barcelona, Spain - 13 February 2007** - Global IP Solutions (GIPS), a leading provider of embedded media processing solutions, today announced that its VoiceEngine Mobile™ solution is available for Symbian OSTM v9. VoiceEngine Mobile provides a solution that ensures high quality sound for voice traveling over packet-based networks. Symbian OS is licensed by the world's leading mobile phone manufacturers and to date, over 100 million Symbian smartphones have shipped worldwide to over 250 major network operators.

The development of Voice over IP (VoIP) applications for the mobile environment has always been especially challenging as developers must contend with obstacles from network difficulties to device limitations. With Symbian OS, designed for advanced 2G, 2.5G, 3G and HSDPA mobile phones, GIPS VoiceEngine Mobile alleviates these challenges and addresses issues such as network degradation, acoustic echo and background noise.

VoiceEngine Mobile is a comprehensive plug and play solution specifically designed for mobile applications, and is part of GIPS VoiceEngine product family. These solutions are designed to allow developers of VoIP to simply and quickly integrate voice into their products. The GIPS VoiceEngine framework provides all of the necessary components for high quality voice processing over packet networks, even under adverse network conditions, providing a consistent, reliable end user experience regardless of platform.

Gary Hermansen, President and CEO of GIPS, said: "The release of VoiceEngine Mobile for Symbian OS v9 complements existing VoiceEngine offerings and ensures that operators and service providers have access to the widest choice of devices, while delivering high quality voice. By working with Symbian we are allowing VoIP developers to focus on their core competencies while combining their applications with mobile telephony, and quickly bring these applications to market."

In addition to the Symbian platforms, GIPS VoiceEngine Mobile is available on Microsoft Windows Mobile platforms, allowing developers to reach more than 85% of

the smartphone market. GIPS VoiceEngine Mobile is also available for PDAs with an optimization for PocketPC. GIPS has delivered VoiceEngine Mobile to more than 40 customers. GIPS VoiceEngine is used by leading VoIP providers including Yahoo, Nortel, Samsung, and Skype.

### **About Global IP Solutions**

Global IP Solutions (GIPS) offers multimedia technologies for real-time communications over packet networks. GIPS enables companies to deliver IP applications that offer the highest quality user experience, as well as revenue-enhancing opportunities across a multitude of devices and services. Global IP Solutions provides best-in-class voice and video quality and fidelity in end-to-end IP communications with robustness against packet loss. GIPS' world-renowned media processing and IP telephony experts deliver these solutions to service providers, enterprises, applications developers, network equipment, gateway and chip manufacturers. Companies using Global IP Solutions products include Nortel, Skype, WebEx, Yahoo!, AOL, EarthLink, BlueCross/BlueShield and other key players in the VoIP market. Global IP Solutions is a member of the Intel® PCA Developer Network, the Motorola Design Alliance, Symbian Platinum Partner Program and Texas Instruments' third party developer network. Global IP Solutions has headquarters in San Francisco and offices in Santa Barbara, Stockholm, Hong Kong and Boston. More information is available at <http://www.gipscorp.com/>
