Euroseek Access and KabelData in agreement on broadband installations

The Internet service Euroseek has signed a contract with KabelData in Sweden, for broadband connection at three different places, providing 2 000 households with access to high-speed Internet.

Euroseek Access will use a combination of fibre, DSL technology and the internal cable TV network to connect houses and apartments in Södertälje, Bromma and Lidköping, Sweden.

“Our concept is to use the technology which suits our customers best on the basis of their prerequisites, geographical location, and their preferences,” says Catherine Sahlgren, CEO of Euroseek.

“Co-operation with Euroseek means that KabelData can offer customers both Internet access and a wide range of services and multiple content on the net,” says Arne Johansson, Managing Director of KabelData.

Euroseek Access is providing the Internet capacity for KabelData acting as a service provider for the households. The agreement is to run for three years and will give households a permanent connection with a capacity of up to 2 Mbit per second.
