Neonet enhances its global latency management further

Neonet, the global provider of execution services and trading technology, today announced that it will start to deploy CorvilNet 5.1 for latency management. This will provide an even more efficient IT infrastructure for Neonet's clients. Neonet plans to deploy the software in multiple locations including Stockholm, London, New Jersey and Frankfurt.

"Maintaining a low-latency trading infrastructure is essential for driving our electronic execution business," said Neonet CEO and President, Simon Nathanson. "The velocity of Neonet's direct market access, algorithmic, smart order routing and real time market data services must continuously operate at peak, ultra low-latency performance levels, and will now have a strong catalyst in CorvilNet 5.1. Our focus is to provide our clients with an even more efficient service."

CorvilNet monitors, analyzes and optimizes electronic trading and market data applications against ultra-low latency objectives. Key enhancements of CorvilNet 5.1 include latency measurement of messages (e.g. FIX) that provide a deeper and more sophisticated view of trading infrastructure performance. A new detection feature monitors market data feed quality and pinpoints inconsistencies.

"Latency management is a category breakthrough, and CorvilNet was a first in pioneering this emerging segment that extends beyond ad hoc latency measurements to include both microsecond application service level monitoring together with real time infrastructure analytics for streamlined, low-latency trading," said Corvil CEO, Donal Byrne. "CorvilNet 5.1 raises the bar for latency management systems with the integration of a host of new powerful features and performance improvements and the Neonet win underscores this value proposition."

As of June, Neonet is part of Corvil's global client base of leading incumbent exchanges, alternative trading platforms, agency brokers and market service providers.

About Neonet

Neonet is a global agency brokerage firm and technology provider, offering professional market participants neutral, high speed brokerage services and advanced trading software solutions. Neonet's in-house developed platform offers connectivity to the world's leading market places globally across the key regions of North America, Europe, Asia and Australia. Neonet's cutting-edge technology solutions, Neonet XG, include an integrated product suite. It features high speed market connections, a comprehensive execution management system, market data services and advanced trading tools. Neonet is listed on the NASDAQ OMX Stockholm and has clients in over 20 countries globally. For more information, please visit: www.neonet.com.

About Corvil

Corvil, leader in electronic trading and market data latency management, was founded in 2000 and operates from New York, London and Dublin. The company's global client base encompasses electronic traders, market centers, alternative trading platforms and market service providers. Recognized as a technology innovator in latency management, Corvil's products offer a complete solution for enhancing electronic trading, execution and market data including SLA (service level agreement) compliance, performance monitoring, event troubleshooting and infrastructure optimization. For more information on Corvil, please visit www.corvil.com.
