Saab and Mxi Technologies sign Teaming Agreement for Military Fleet Management

Defence and security company Saab and MRO software company Mxi Technologies have signed a Teaming Agreement to cooperate in the provision of Military Fleet Management utilizing Mxi's Maintenix software.

Saab, acting through its Business Area Support and Services, is pleased to announce the signing of a Teaming Agreement with Mxi Technologies in the provision of Military Fleet Management to armed forces worldwide. This cooperation combines Saab's experience in integrated technical and logistic support solutions for complex systems and Mxi Technologies state-of-the-art Maintenix software, to deliver a comprehensive Fleet Management offering.

When weighing the Total cost of Ownership (TCO) for military systems, Saab's support solutions deliver unparalleled customer value by optimizing system availability (in design) and in-service support investments from a life-cycle perspective. A key enabler is an integrated approach to information management to continuously update "As Designed", "As Delivered" and "As Maintained" system configuration based on operational experience.

Maintenix software enables Saab to secure the integrity of "As Maintained" in-service systems and feedback findings to influence design changes and new delivery configurations. Maintenix advanced configuration management supports planning, production and maintenance reporting (including airworthiness management) which combined with Saab operational experience, facilities and personnel, enables the delivery of turnkey Fleet Management solutions.

"Teaming with Mxi Technologies is an important step for Saab in securing access to best-of-breed tools which support delivery of innovative support solutions to meet current and future customer requirements. A state-of-the-art Fleet Management capability for Air, Land and Naval domains is an essential part of Saab's support solution portfolio", says Lena Bergvin-Lundqvist, Vice President and Head of Business Unit Life Cycle Logistics at Saab.
