SaabTech Systems receives an order for modifications of StriC for SEK 41 Million

SaabTech Systems has received an order from FMV (Swedish Defence Materiel Administration) totalling SEK 41 million for modifications of StriC, the Swedish Armed Forces' Command and Control System, used for e.g. mission control of the Gripen.

The order includes modifications to changes that have been made in the technical systems interfaced to StriC. SaabTech Systems is the main supplier of the StriC Command and Control System which has been developed in close co-operation with FMV and the Swedish Air Force. It is one of the largest systems integration and software development projects ever conducted in Sweden. StriC has now been operational since 1998 and ongoing development and integration of StriC with interfacing systems is essential in meeting the future technical and tactical requirements of the Swedish Armed Forces.

Saab is one of the world's leading high-technology companies, with its main operations focusing on defence, aviation and space. The group covers a broad spectrum of competence and capability in systems integration.
