AerotechTelub delivers new systems to the National Rail Administration to increase the goods train capacity

AerotechTelub Contracting AB has received an order worth approximately SEK16.5 million from the National Rail Administration, Eastern region, for the introduction of new, modern electrical, telecom and signal systems that will mean that the goods train capacity at Mjölby station can be increased.

"This is an important order and further evidence of our ability to implement new telecom and signal systems within the traffic infrastructure area that has a very large development potential" says Göran Jakobsson, Business Manager AerotechTelub Contracting.

"The new systems will offer a safer, quicker and more flexible passage for the goods trains in Mjölby" says Dan Sennerby, Project Director, National Rail Administration, Eastern region.

Mjölby station is part of the goods train route through the Bergslagen area and is very important for the north/south goods transports through the country. The station has very heavy traffic today. The present goods train capacity is insufficient and means that several goods trains must be directed onto other, longer routes.

AerotechTelub Contracting AB is a subsidiary of AerotechTelub.

AerotechTelub is a service company which offers qualified technical services, maintenance and customer-adapted system solutions within information technology, electronics and aviation technology for the military and civil defence, government departments and public authorities as well as selected sectors of trade and industry.

AerotechTelub, a company in the Saab Group, has 2,650 employees and a turnover of approximately SEK 2,5 billion.

Saab is one of the world's leading high-technology companies, with its main operations focusing on defence, aviation and space.
