## **AerotechTelub delivers radio link systems to the National Rail Administration**

**AerotechTelub has signed a 2-year contract with the National Rail Administration regarding deliveries of radio link systems from Nokia. The contract is worth between SEK20-25 million.**

- The contract further strengthens our position as supplier of telecom contracts within the infrastructure area, says Göran Jakobsson, Business Manager at AerotechTelub Contracting.

The radio link system will be used for communication between radio base stations and from radio base stations to an exchange in MobiSIR that is the new train radio system for the railways.

MobiSIR replaces all the radio and mobile telephone systems that so far have been used on the railways. MobiSIR is based on the GSM standard for mobile telephony but has been further developed in GSM-R in order to fulfil railway requirements in accordance with an international specification. The "R" stands for Railway and GSM-R is the common standard for Europe's railway administrations.

In addition to hardware, the contract also includes the possibility for the National Rail Administration to suborder project management, surveys, installation and commissioning of the radio link systems.
