AerotechTelub wins training systems order from Hägglunds

AerotechTelub has signed a contract with Land Systems Hägglunds AB for an engineer training and education system. The system is for use by the Swiss Army for training on the CV9030 CH Combat Vehicle, made by Hägglunds. The agreement is worth in the region of MSEK 40 and relates to deliveries in 2005-2006. The order will primarily affect AerotechTelub's operations in Arboga and Linköping, Sweden.

"This order is further proof of our strength in operational support systems, of which training and education systems for engineers and operators are a particular niche area. We have a long tradition as a supplier of support systems for training, planning and evaluation for the Swedish Air Force. Relevant projects in 2004 include delivering systems for engineer training on the JAS 39 Gripen. This contract represents a significant, major step into the market for ground systems as well," says Kristian Hammar, division manager at AerotechTelub.

The use of computer-based systems in engineer training secures major rationalization and cost savings for the user. This is particularly true when dealing with complex systems in defence technology applications, for instance, where training costs can be extremely high. For the CV9030 CH Combat Vehicle, using this system means that both engineers and operators can practice handling and faultfinding in the system, in a controlled, fully realistic environment.

AerotechTelub is a service company which offers qualified technical services, maintenance and customer-adapted system solutions within information technology, electronics and aviation technology for the military and civil defence, government departments and public authorities as well as selected sectors of trade and industry.

AerotechTelub, a company in the Saab Group, has 2,200 employees and a turnover of approximately SEK 2.3 billion.

Saab is one of the world's leading high-technology companies, with its main operations focusing on defence, aviation and space. The Group covers a broad spectrum of competence and capability in systems integration.
