Saab develops Royal Thai air defence

Saab has received an order worth 158 MTHB from the Royal Thai Air Force for development of the Royal Thai Air Force air defence command and control system.

The system will be developed in close collaboration with the customer and adapted for the specific requirements of the Royal Thai Air Force. The system involves the latest technology within for example data fusion capabilities, and is developed to be intuitive and user friendly.

“The order is important for the continued development of Saab’s expertise in command and control systems for air defence”, says Peter Wimmerström, President of Saab Systems.

The contract has been awarded in competition with the major command & control companies in the world and marks the continued cooperation between Saab and the Royal Thai Air Force.
