Lufthansa Technik orders Zonal Comfort™ System for Boeing Business Jet Aircraft

Lufthansa Technik has ordered CTT's Zonal Comfort™ System for one (1) Boeing Business Jet, BBJ2, aircraft. The BBJ2 aircraft is based upon the B737-800 aircraft.

Delivery of the system is planned for first quarter 2004.

In total CTT Systems has received order to equip fourteen BBJ aircraft with its Zonal Comfort™ System.

"We are pleased to announce today's order from Lufthansa Technik for our Zonal Comfort™ System. It is encouraging to see the increasing interest for our system to enhance the air quality onboard VIP aircraft", said Torbjörn Johansson, President, CTT Systems.

The Zonal Comfort™ System addresses the problems associated with dry air in first and business class cabins and executive jets by raising humidity levels in the cabin to 25% providing better travelling comfort for passengers and crew. The system is based on evaporative cooling technology. Incorporated with the Zonal Comfort™ System is the Zonal Drying™ System, which prevents condensation between the cabin and the skin of the aircraft. Both products work together to tackle humidity control and eliminate condensation issues on aircraft.

CTT Systems AB is located in Nyköping, Sweden and listed on the Stockholm Exchange O-list in Stockholm.
