JAMES E. CARY CANCER CENTER SELECTS RAYSTATION®

RaySearch Laboratories AB has received an order for its RayStation® treatment planning system from the James E. Cary Cancer Center located in Hannibal, Missouri.

Hannibal Regional Hospital provides comprehensive radiation therapy services at the James E. Cary Cancer Center to patients throughout northeast Missouri, west-central Illinois and southeast Iowa. Since 2003, the patient care team has been bringing the most current treatments available to patients in the tri-state area while providing the highest level of care and compassion.

The James E. Cary Cancer Center will use RayStation® as its treatment planning system for conventional 3D-CRT treatments, as well as more advanced treatments, such as IMRT. The order also includes advanced tools enabling a more efficient treatment planning process, such as Multi-Criteria optimization. This highly intuitive tool lets the clinician evaluate the impact of changing different treatment priorities in real-time, which has a large potential to speed up the time-consuming treatment planning optimization process.

“RayStation provides the James E. Cary Cancer Center with a complete and comprehensive treatment planning solution for our current needs with the most robust set of planning tools to allow future growth. As the only American College of Radiology accredited center within 100 miles, Raystation will allow us to continue to serve the region’s cancer patients at the highest level”, says Joseph Bean, M.D., Radiation Oncologist at James E. Cary Cancer Center.

James E. Cary will begin the implementation in March with plans of being clinical in Early April.

“In the beginning of the year we released RayStation® 2.5, the first complete version of RayStation®, and the system has been well received in the market. We note a growing interest for RayStation®, so this order will be followed by many more. We are proud to have The James E. Cary Cancer center has our first customer in the Mid-West and we will work closely together with their team to ensure a smooth clinical implementation”, says Johan Lof, CEO of RaySearch.

About RayStation®

RayStation® integrates all RaySearch’s advanced treatment planning solutions into a flexible treatment planning system. It combines unique features such as multi-criteria optimization tools with full support for 4D adaptive radiation therapy. It also includes functionality such as RaySearch’s market-leading algorithms for IMRT and VMAT optimization and highly accurate dose engines for both photon and proton therapy. The system is built on the latest software architecture and has a graphical user interface offering state-of-the-art usability.

About RaySearch

RaySearch Laboratories is a medical technology company that develops advanced software solutions for improved radiation therapy of cancer. RaySearch’s products are mainly sold through license agreements with leading partners such as Philips, Nucletron, IBA Dosimetry, Varian, Accuray and Siemens. To date, 15 products have been launched through partners and RaySearch’s software is used at some 1,800 clinics in more than 30 countries. In addition, RaySearch offers the proprietary treatment planning system RayStation® directly to

clinics. RaySearch was founded in 2000 as a spin-off from Karolinska Institutet in Stockholm and the company is listed in the Small Cap segment on NASDAQ OMX Stockholm.
