

Please find attached a press release on behalf of Syspal Limited detailing their SAFE4 product range, the only disinfectant in the UK to be approved by the VLA and has been recently proven to be effective against the H1N1 (Swine Flu). The accompanying image is included at the bottom of this e-mail.

I would be extremely grateful if you could use this in a forthcoming issue.

Best regards

Louise Kelly

PROVEN AGAINST GERMS SAFE4 EVERY SITUATION

Syspal is offering a proven weapon in the fight against bacteria and cross-contamination that is safe for any situation.

Safe4 has been the trusted disinfectant choice in healthcare, veterinary and food processing situations for over 15 years, recently becoming the only disinfectant in the UK to be approved by the VLA. Its unique formulation is highly effective against bacteria, fungi, viruses and H1N1 (Swine Flu), yet is totally safe to use for those who come into contact with it. Now, this best selling range has even more options.

Safe4 does not contain harmful Phenols, Aldehydes or alcohol. Being water-based, all the products are biodegradable as well as non-staining, non-toxic and non-tainting. There is no need to wash them away with water after application which saves time and encourages good hygiene routines.

To meet every requirement, the range now includes disinfectant, wipes and an odour killer developed from a blend of organic oils that is designed to break down the molecules that cause odour, rather than merely cover up one odour with another.

For situations where hygiene is of the utmost importance, there is a convenient and effective hand sanitiser which is simply rubbed into the hands once debris has been removed – without the need for soap, water or towels. Also available is an accompanying hand scrub that kills bacteria such as *Bacillus* spp, *Staphylococcus aureus* and fungi and yeast including *Aspergillus* spp.

The routine use of disinfectant has grown alongside our understanding of the role of cross-contamination, comments Derry Young, Director for Syspal. The Safe4 range combines effectiveness with safety the ideal solution for any environment where hygiene standards are vital.
