

*Effective treatments for
common skin disorders*

PRESS RELEASE AUGUST 24, 2009

MOBERG DERMA SECURED SEK 35 MILLION IN NEW SHARE ISSUE

The pharmaceutical company Moberg Derma recently secured SEK 35 million in a new share issue. Both existing and new shareholders subscribed for shares in the issue. More than SEK 100 million has now been raised for its operations since the company was established in March 2006.

"We are very pleased with the interest shown by investors what has been a difficult market climate in recently. The new share issue has secured additional capital for the continued development and start of commercialization of the product portfolio, and has also strengthened the company's shareholder group," says Peter Wolpert, President and CEO of Moberg Derma.

Moberg Derma is developing a portfolio of medical products for skin disorders based on the company's patented Kaprolac[®] principle, acquired projects and technology licensed from leading drug delivery companies. This spring the company announced its first commercial agreement for K101 for the treatment of nail fungus, after having reported positive phase III results. Moberg Derma intends to expand its existing product portfolio through in-house development as well as through further acquisitions.
