

SAS Tech Launches new goods receiving portal from ComActivity

SAS Tech goes live with a new goods receiving portal from ComActivity. The project was run by SAS together with CSC and ComActivity. The portal is one part of a bigger solution for managing aircraft component data. This will shorten time spent on maintenance and reduce downtime.

During the summer and autumn, SAS Tech, together with its IT service partner CSC and ComActivity implemented a new system for goods receipt. The solution is completely web based and was put into operation simultaneously at Arlanda, Gardermoen and Kastrup.

– After a fast and efficient project with ComActivity and CSC, we went live without any problems. We even got praise from users because it went so well, something we do not hear very often, says Kim Hansen, IS Development, SAS Tech.

The solution is part of an overall solution for the distribution of stock between the SAS business system Aura, the maintenance system M3 and SAS component supplier, Singapore Technologies, and their supply system from SAP.

– Our customers feel that ComActivity can deliver user-friendly solutions that are easy to change and that provide significant benefit directly. With the help of ComActivity Business Process Platform, we can offer our customers added features to their existing systems with ready connections to business systems such as M3/Movex. We offer software for continuous business development, beyond traditional business software. All solutions from ComActivity are based on "Best Practice". That is what we call Lean Software for Lean Business, says Magnus Grönvik, Sales and Marketing Director, ComActivity AB

The system will provide a shorter service times and reduce aircraft downtime. When replacing the components on an aircraft all the information about installed components must be completely accurate before the plane is allowed to go back into service. Receipt of component data and handling of the components themselves at the installation or removal in an aircraft and cargo at goods receipt must be done quickly and efficiently. The amount of information per component is comprehensive. Effective data management gives high efficiency and quality gains.

The basic thesis of ComActivitys solution-oriented model is that: Business Solutions should give users what they want when they want it. Business Solutions should not be based on other people s requirements. The solution should be delivered in the way the customer wants it. Too much is counter-productive and too little is insufficient. Only balanced functions with high flexibility is "perfect".
