Thalamus provides new energy service

Thalamus Energyservice makes it possible to monitor control and communications systems from any computer connected to the Internet. Two satisfied customers - ABB Contracting in Helsingborg and Helsingborgs Automatikkontroll - have already experienced the advantages the service gives.

Because Thalamus hosts Energyservice, customers do not have to invest in hardware and personnel to ensure that the monitoring systems run safely. ABB Contracting have been using the service since November 2000.

"Thalamus Energyservice broadens our product portfolio and makes it easy for us to connect components that need to be supervised" says Peter Andersson, Service Technician at ABB Contracting.

Besides from monitoring and setting values from any computer, customers can also handle alarm reports via Energyservice. Different types of alarms can automatically be directed to the right person via e-mail, to a cellular phone, via sms or fax.

"We are close to the property business, and we know this is a much longed for service" says Thomas Rebermark, Marketing Manager of Thalamus. "Our service makes supervision and management of energy control systems easier, while the customer maintains the control over the property."

Thalamus Networks AB (www.thalamus.se) is the only operator that can offer a complete portfolio of services for intelligent living. Apart from Internet accesses, Thalamus can also offer energy management, information, media and telephony. Thalamus® is provided over optical fibre, cable-TV and Ethernet (LAN). Thalamus Networks is listed on the OM Stockholm Stock Exchange's O-list. Net sales are approximately 40 MSEK a year with 40 employees.
