

murphx announces new state of the art colocation services

Secure data centre offers scalable and reliable storage environment

murphx opened the doors to its new purpose-built data centre facility on the South Coast this week. The move marks the start of a new level of customer service as murphx provides access to highly secure, scalable, high power rack and suite environments as well as direct access to the murphx network for lower latency services and high speed access via its upstream carriers and international peers. The secure data centre also includes options for connectivity to London. Director Carl Churchill stated:

We are excited to announce the opening of the new murphx data centre, offering 75,000 sq ft of secure space and 15mW of power which is delivered both via resilient power feeds and resilient substations. We are particularly proud of the fact that it is one of the lowest carbon footprint facilities in the UK, with a PUE of just 1.7.

The facility can support up to 25kW (over 100AMP) per rack, and has space for up to 1500 racks. As well as resilient power feeds from multiple points on the national grid, the centre includes the latest safety measures such as VESDA Early Warning Smoke Detection and FM200 Fire Suppression, as well as being manned by security personnel 24x7 alongside perimeter fencing and a secure gated entry system with anti-ram Vee gates.

Churchill added:

With this new data centre we re able to offer highly secure, carrier class facilities, and it s fully scalable which means there s room to grow as your business does. We have the capability to support requirements ranging from 1U through to more than 120 rack secure suites, and can offer all our customers state of the art technology and security as well as meeting rooms and office space on site.

About murphx murphx Innovative Solutions Limited is a Tier 1 connectivity solutions company providing a range of services including wholesale broadband and dialup, virtual private networks, leased lines and IP transit to the resale channel. The company operates as an enabler providing the operational infrastructure used by its customers to embrace convergent technologies such as voice over IP and video conferencing. murphx was formed in 2001. Since that time the company has built a national network and firmly established the business as a pioneer of innovative communications services with a consistent record of strong earnings growth of figures up 167.1% on £6.2m sales, which placed the company fifth in the 2009 Plimsoll Portfolio Analysis for UK Internet Services. The reliable and resilient infrastructure is the underlying strength of the murphx business. The ability to manage and control the entire network point-to-point ensures guaranteed service levels and dependability for customers. This coupled with leading edge technology and a highly skilled team ensures murphx are firmly positioned as one of the few Europe-wide internet service providers. The success of murphx is not just the result of an advanced network or unique portfolio of products and services but also an ongoing commitment to customer requirements. For years organisations have been forced to adopt solutions that were a near-match to their requirements; this next best scenario is no more. www.murphx.com
