Global IP Solutions First to Bring Video Chat to Android Mobiles

Mobile Application Developers Now Able to Build Video Chat/Conferencing Capabilities for Android with Outstanding Video Ingenuity from GIPS

San Francisco — April 7, 2010 — [Global IP Solutions](#) (Oslo Børs: GIPS), the leading provider of HD voice and video processing solutions, announced today another first-to-market with GIPS VideoEngine for Android, which provides mobile developers the vital building blocks for integrating video conferencing/video chat into applications running Google's Android mobile operating system.

"GIPS continues to innovate for mobile application developers by offering the ability to incorporate high-quality voice and video communications without having to worry about the complex challenges of wireless networks," said GIPS' Chief Marketing Officer Joyce Kim. "Mobile applications are becoming more and more sophisticated and by providing HD voice and video capabilities inside their applications, our customers continually differentiate themselves to lead the mobile application market."

Mobile video application revenue is expected to double worldwide over the next four years to \$2.42 billion, with much of the growth taking place this year, according to U.K.-based research firm [Screen Digest](#). Now with GIPS [VideoEngine™ Mobile](#), developers can integrate the best real-time video technology overcoming the multiple issues intrinsic to IP networks and devices. By dealing with obstacles such as delay, packet loss, bandwidth limitations and echo; GIPS VideoEngine Mobile ensures video conversations dynamically adjust with Wi-Fi or 3G cellular network conditions maintaining great caliber video.

"GIPS VideoEngine is capable of running on a wide variety of smartphone devices globally," said Ronald Gruia, Frost & Sullivan's Principal Analyst of Emerging
