SYSPRO 6.1 empowers easy user customising

SYSPRO 6.1's advanced and secure Power Tailoring features and functions offer new levels of customisation that enable users to take business performance and efficiency levels to new heights, says K3 Business Technology Group (K3), the UK's SYSPRO ERP specialist.

With SYSPRO 6.1 – the latest version of the leading ERP solution for mid-market manufacturing and distribution companies – the customisation is so easy to perform that individuals are able to fully customise how the system works for them without the need for programming skills.

ERP systems should provide readily accessible and beneficial information. That's one of the key points of having business software. It should improve productivity and not just make people work differently without delivering major benefits, says Howard Joseph, Managing Director of K3 Business Technology Group.

SYSPRO 6.1 delivers the full benefit of service-oriented architecture software design to K3 customers. The software's fluid interface will provide user-friendly navigation based on best principles of software design and usability. SYSPRO ERP has been developed to provide information at the user's fingertips and this has been substantially advanced in SYSPRO 6.1.

SYSPRO has long been regarded as one of the most user-friendly ERP systems available. K3's close relationship with its customers will ensure that each new release will see a revolution in the way that the software performs for users.

It is very easy to take for granted that people are increasingly more IT aware but we keep sight of our key objective of delivering software that empowers users and their businesses and not programmers. With SYSPRO 6.1, the Power Tailoring and Fluid Interface functionality gives users the customisation capabilities they need to get the most out of their investment in SYSPRO, says Howard Joseph, Managing Director of K3 Business Technology Group.
