M2S receives order from UfI valued at SEK 5 M

M2S has received an order from British Ufi, University of Industry. The order, valued at slightly more than SEK 5 M, is a one-year extension of the order M2S's British subsidiary received in March 2000.

Through Ufi, the British government is carrying out a massive education effort in which an important element is IT training. In this area, Ufi selected M2S as one of the suppliers.

The order comprises software based on M2S technology for web-based learning and involves Wit training to all 900 so-called *learndirect* learning centers established by Ufi in the UK.

The order includes M2S Wit Standard software and these programs are available on Ufi's servers. After registration, the users can select whether to take the courses at home, from work or through one of Ufi's *learndirect* centers.
