

Next generation SYSPRO 6.1 ERP enables step change in BPM

NEWS

Release date: 18th May 2010

Next generation SYSPRO 6.1 ERP

enables step change in BPM

SYSPRO 6.1 introduces an easy to use software toolset comprising SYSPRO Enterprise Analysis Modelling, Monitoring and Management (SEAM3).

A bang-up-to-date version of SYSPRO's ERP suite will revolutionise Business Process Management (BPM) says Manchester-based K3 Business Technology Group (K3).

A major new release of SYSPRO 6.1 offers substantial capabilities that are focussed on delivering new BPM features that are unique to K3's advanced enterprise resource planning (ERP) solution for mid-market manufacturers and distributors.

Excited by the release of SYSPRO 6.1, Howard Joseph, Managing Director of K3 Business Technology Group, said: The system is more easily tailored to meet the business process needs of the customer, which leads to quicker implementation and earlier roll out. It means full integration of the system with the way managers want to run their business.

He went on to say: The unique features of the software provide rapid access to management information which is crucial to ensuring that the business is in tune with client needs. It also makes their business more agile by keeping in step with future demands, allowing them to remodel processes and stay ahead of the game.

K3 says that many companies overlay an ERP system onto their existing business process model and struggle to get the two to align, which is a costly and inefficient process. It means that the system takes longer to implement, which hinders roll out and ultimately leads to the late arrival of any customer benefits.

SYSPRO 6.1, however, introduces an easy to use software toolset comprising SYSPRO Enterprise Analysis Modelling, Monitoring and Management (SEAM3). This combines SYSPRO Workflow Services, SYSPRO Process Modelling and Enterprise Performance Management to allow K3 customers to rapidly align business requirements with the ERP system to maximise Return On Investment (ROI).

SYSPRO 6.1's innovative SEAM3 features takes operational efficiencies to new levels by recognising each customer's unique business process requirements and automatically aligning and remodelling them during the ERP implementation phase.

SYSPRO does this by providing clarity of information and a bird's eye view of their manufacturing or distribution capabilities and how they meet their clients' needs. This information is readily accessible via SYSPRO's user-friendly graphical screens and concise reporting features. In addition, this allows K3 customers to continually remodel their business process as market conditions change.
