

Press release

Mumbai, India and Luleå, Sweden – October 14, 2010

L&T Infotech licenses Effnet's IP Header Compression Technology

Effnet AB, the expert in IP Header Compression technology and L&T Infotech, a provider of protocol stack software for mobile communications, today announced a licensing and co-operation agreement concerning Effnet's IP Header Compression software. The agreement enables L&T Infotech to integrate Effnet's IP Header Compression software into L&T Infotech's LTE UE protocol stack used by user equipment manufacturers.

"We are pleased to have L&T Infotech as our customer and partner. L&T Infotech has a rich corporate legacy and a global reach. Our partnerships extend our market reach to all tiers of user equipment manufacturers." says Joakim Enerstam, Managing Director, Effnet AB.

IP header compression is used to reduce protocol header overhead thereby reducing the need for bandwidth. It is an important component required to efficiently enable services like VoIP over wireless networks.

"We are glad to offer our clients the IP header compression from Effnet integrated with our LTE UE stack. This has been successfully tested for Cat 3 operation (100/50 Mbps DL/UL) with a video streaming application. L&T Infotech's clients and LTE network operators will be able to derive substantial benefits by saving cost and supporting more users in the available bandwidth. Also, the end users will enjoy an improved quality of experience of the applications and services," commented Mr. Isaac Sundarajan, Business Unit Head, Product Engineering Services, L&T Infotech.
