C Technologies' subsidiary Anoto and TietoEnator initiate collaboration in order to develop differentiated services based on the Anoto concept

TietoEnator and Anoto have entered a collaboration agreement implying that services based on the Anoto concept will be part of TietoEnator's offering to customers within specific business sectors. By using Anoto's technology and the development tool ADK, TietoEnator will be developing new solutions resulting in the benefit of added value to specific customers.

"The cooperation with Anoto opens new opportunities in the development of IT solutions", says Åke Plyhm, Senior Executive Vice President and Deputy CEO, TietoEnator. "There is a large potential for this type of mobile and wireless thinking in the IT solutions delivered by TietoEnator. Not only within logistics, travels and transports, but also within other industrial sectors of interest to TietoEnator".

"TietoEnator, with its staff of 10,000 on the Nordic market, is one of the most prominent players in respect of system integration. Through the Group's expertise and large amount of customers, new doors are opened to Anoto. TietoEnator has the capacity and strong position which is necessary to develop and implement new services effectively", says Christer Fåhraeus, President of Anoto AB.

TietoEnator will be building considerable competence with regard to Anoto's development tools (ADK) and will continuously be developing services and business solutions for specific business segments. Adaption will be carried out in close cooperation with the Group's customers and markets within all business sectors.

About TietoEnator:
With a staff of 10,000 and annual net sales of 1.1 billion euros, TietoEnator is a leading supplier of high value-added IT services in Europe. TietoEnator provides consulting, systems development and integration, operation and support, product development services for customers, and software services. The Group has in-depth knowledge of its customers' businesses in areas such as telecommunications, finance, the public sector and the forest industry. www.tietoenator.com

About Anoto:
Anoto AB was founded in Lund, Sweden in late 1999 as a subsidiary of C Technologies AB, which is listed on the O-list of the OM Stockholm Exchange (Attract 40). The company currently has about 170 employees working in offices in Lund, Stockholm, Boston, Tokyo and Hong Kong. Ericsson holds a minority stake in Anoto and is also represented on the board. Anoto AB has created a de facto standard for digital paper. The concept is built around converting mankind's most common way of communicating, through pen and paper. Proprietary patterns, advanced image processing, Bluetooth wireless technology and an information infrastructure enables Anoto's system. Hand-written notes written on ordinary paper turn digital through the almost invisible Anoto pattern and can be sent directly through a computer, mobile phone, PDA, palm device or a fax. Even services such as paper- based digital orders can be handled with only pen and paper. www.anoto.com

About C Technologies:
C Technologies AB (publ) was founded in 1996 and is a Swedish well-established high-technology company with cutting-edge expertise within the fields of digital camera technology, image processing and digital pens. The Company's primary product is the C-Pen digital pen, which has received several important international awards for best IT product. The C-Pen scans, stores, processes and transmits text to a PC, either by infrared or by cable. The pen can also translate, send e-mail, SMS and facsimiles as well as reading barcodes. The C Technologies Group currently has about 250 employees and offices located in Lund, Stockholm, Atlanta, Boston and Tokyo. Major shareholders include company founder Christer Fåhraeus, State Street Bank, Ericsson Mobile Communications and SEB Fonder. C Technologies' share is listed on the O-list of the OM Stockholm Exchange (Attract 40). The Group also comprises the subsidiaries Anoto AB and WeSpot AB.

The Anoto concept:
The Anoto concept intuitively connects paper and pen with the digital world. The concept consists of a pattern that can be printed on any paper, a digital pen with Anoto functionality that can read the pattern and record the pressure and movement of the pen, advanced image processing and the information structure pinpointing the pen's position on the pattern and which service the user has chosen to activate. Everything that is written on digital paper with Anoto functionality is stored in the digital pen and forwarded by a Bluetooth-enabled device (e.g. a mobile phone) to any computer or mobile phone in the world.

The digital pen with Anoto functionality uses ordinary ink, but unlike the ordinary ballpoint pen, it also has a "scanning eye" consisting of an infrared camera and an advanced image-processing unit. The pen contains a Bluetooth radio transceiver. When writing with an Anoto pen on a paper printed with the Anoto pattern, digital snapshots of the pattern are taken continuously. Every snapshot contains enough information to make a calculation of the exact position of the pen. A digital trace is thus created by the movement of the pen.

The digital pen with Anoto functionality does not only record what was written, but also how it was done. The application can therefore be used to verify and identify who wrote. The pen records simultaneously position, speed, pressure on the paper and the exact time. The information is transmitted, via a mobile phone or computer, as a graphical e-mail, fax, SMS or input to databases assisted by the infrastructure provided by the Anoto concept.

The Anoto concept will be used in a number of services and applications. Later this year basic services enabling handwritten text to be transmitted directly as a graphical e-mail, fax or SMS will be launched. It will also be possible to save handwritten notes and Post-it® notes in the computer. Additionally the concept enables a large number of vertical

applications, such as placing electronic orders, for example from an advertisement in a magazine, or filling in case records, order sheets and forms.
