

PRESS RELEASE NOVEMBER 11th 2010

MOBERG DERMA SIGNS AGREEMENT FOR EMTRIX[®] IN PORTUGAL AND 10 MARKETS IN AFRICA AND CENTRAL AMERICA.

Moberg Derma AB today announced that a distribution agreement has been entered into with Laboratório EDOL Produtos Farmaceuticos S.A. for Emtrix[®] – Moberg Derma's product for discolored and damaged nails caused by nail fungus (onychomycosis) or nail psoriasis. Under the agreement EDOL is granted exclusive rights to market and sell Emtrix[®] in Portugal and ten markets in Africa and Central America. Moberg Derma will manufacture Emtrix[®] for EDOL.

"The agreement with EDOL enables Emtrix[®] to be promoted on additional geographic markets, and contributes to our strategy to develop Emtrix[®] into a global product. We look forward to the collaboration with EDOL," comments Moberg Derma's CEO, Peter Wolpert.

About Emtrix[®] and nail diseases

Emtrix[®] is a prescription free, topical nail product and has the potential to become first-line treatment for common nail disorders. Launch of Emtrix[®] was initiated in the first markets in September 2010. Safety and efficacy have been demonstrated in several clinical studies including more than 500 patients. Emtrix[®] has a unique and rapid mechanism of action which brings visible improvements within 2-4 weeks of treatment. Nail fungus is the most common nail disease and afflicts approximately 10% of the general population and increasing with age. The estimated global market potential exceeds USD 1 billion. The untapped potential is significant since many patients remain untreated. It is generally recognized that there is a need for new efficacious and safe topical treatments.
