Innovationsbron AB invests in Swedish Limes Audio AB

Innovationsbron AB invests in the Sweden-based company Limes Audio, which develops and licenses software for unmatched audio performance in teleconference and videoconference systems. Limes Audio's customers include the conference phone maker Konftel, a subsidiary of Avaya.

"Until now the market has lacked an actor able to offer licensing deals on high quality audio software to other producers of conferencing products and systems. Limes Audios core technology is today used in several products sold worldwide and I'm confident about the growth potential of Limes Audio", says Lena Fridlund Forsgren, Investment Manager at Innovationsbron.

"Our technology and knowledge within core audio signal processing for audio conferencing systems are unique, but we need resources to reach out to new customers. The capital contribution from Innovationsbron means that we now have the opportunity to increase our efforts in marketing and sales", says Fredric Lindström, CEO and founder of Limes Audio.

About Limes Audio

Limes Audio develops and licenses high quality audio conferencing technology. Limes Audio provides complete solutions for companies looking to add audio conferencing capacity to their products. The Limes Audio software portfolio includes acoustic echo cancellation, noise reduction, and full-duplex control, i.e. core technologies required for optimal audio performance.
