Cell Network develops portal for FMV

The Swedish Defence Materiel Administration, FMV, has awarded Cell Network a contract to develop a new Intranet portal for the Administration's 2000-strong workforce.

The contract involves project management, business development, programming, systems development, graphic design and IT security. The contract comes into effect from 1st June, and it is estimated that the project will employ a good number of staff from various parts of the Group until the end of the year. As well as this contract, there may also be the possibility of a support contract spanning several years.

- We have chosen Cell Network as our partner because the company had the best solution at the best price, comments Gunnar Ordell, Manager of the FMV Portal project at the Swedish Defence Materiel Administration.

- This contract is testimony not only to the wide range of skills and expertise to be found within Cell Network, but also to the fact that we can deliver complete solutions. What is more, we have lengthy experience of co-operation with FMV, which has allowed us to acquire a very good knowledge of their business. This - coupled with our major technical know-how - is our strength, points out Magnus Söderström, Account Manager of Cell Network Sweden's Public Service Division.

The Swedish Defence Materiel Administration is Cell Network's third biggest customer after Ericsson and Volvo.
