

Press-release

Pronyx Paper receives their second order in Germany

(Already reported in the half -year financial report)

Pronyx Paper has received an order on a PaperLine® StarTrim trim optimization system for Papierfabrik SCHOELLERSHAMMER in Düren, Germany.

Papierfabrik SCHOELLERSHAMMER has two papermachines that manufactures fine paper for art, drawings and the printing industry. They also have a third papermachine producing corrugated papers. The paper production is cut down to specific rolls or sheets for each customer order resulting in a vast amount of formats. PaperLine® StarTrim uses advanced mathematical algorithms to optimize the cut-down of the produced paper to customer products so that wastage is kept at a minimum considering over-all production cost.

"This investment will help us increase the production throughput and our flexibility in the planning area. We are looking forward to benefit from Pronyx experience from the paper industry and earlier integrations with Movex", says Günter Wirtz, Project Manager at SCHOELLERSHAMMER.

Papierfabrik SCHOELLERSHAMMER is currently installing the Business system Movex Paper from Intenia. PaperLine® StarTrim has an extended interface with the system optimizing the utilization of the papermachine production by providing the planners with intelligent trim solutions.

"This cooperation enables us to strengthen our customer's satisfaction by providing interface with a state of the art system as PaperLine StarTrim, interacting with Movex Paper in a way that enables a higher production throughput, says Thomas Rogler, IAC-Manager Paper from Intenia.

"This confirms our expectations on the European markets appreciation on our way of working, being able to deliver tailor-made standard systems at a price level well competing with the traditional pure standard systems and at a much higher customer satisfaction" says Mikael Johansson, General Manager business unit Paper.

Pronyx Paper is business unit of Pronyx AB, which is listed on the Swedish stock exchange.

Karlstad on the 4th of September 2001

Background information

Pronyx shall improve the profitability of our customers by delivering solutions for efficient production, based on a unique combination of industrial knowledge and IT.

Traditional manufacturing and process industries are exposed to an ever-changing business environment, demanding constant efficiency improvements in production, regardless of being at the low or high end of the business cycle. The trend is toward an increasingly close co-operation between customer and supplier. This increases the demands for precision, quality and reliability in all areas of the production process. For this to be achieved, recurring investments are required in systems, which control, optimize, monitor and regulate the flow of production. Pronyx has a unique method for arriving at complete solutions, which enable the client to be at the cutting edge of production technology.

It is Pronyx intention to exploit this method in combination with its expertise in manufacturing and process industry to expand in the Nordic region as well as in other markets with similar conditions.

Currently Pronyx has 140 employees and is organized around its customer segments: Wood, Paper, Industry and Metal. Pronyx is a market-leading supplier of industrial IT-solutions to these segments since the early eighties. Pronyx is quoted on the OM Stockholm Stock Exchange.
