The Swedish Defence Materiel Administration signs deal with Cell ITS worth SEK 6 million

Cell ITS has received an order to upgrade and modify the DISU system of the Swedish Defence Materiel Administration. DISU is a system that is used to make shooting and combat training more effective using laser simulators. The project is set to run until May 2002.

– Cell ITS developed DISU, so the company was the obvious choice of partner when it came to upgrading and modifying the system. Not only that, Cell ITS has both the expertise and the experience we require, comments Krister Kalte, DISU Project Manager at the Swedish Defence Materiel Administration.

Cell ITS has specialised in software development for the Administration's training purposes, and is also the leading supplier in Scandinavia. The deal means that Cell ITS will continue to be entrusted with the delivery of solutions to the Swedish Defence Materiel Administration.

About Cell ITS

Cell ITS (Interactive Training and Simulation) is a company within the Cell Network Group that develops and sells simulators and industrial e-learning solutions. Customers include major industrial enterprises, armed forces and authorities with very high demands in terms of the quality, life and maintenance of training solutions. Cell ITS employs 80 members of staff in Stockholm, Helsingborg, Linköping and Östersund.
