RESCO

Press Release, 8 October 2001

Streaming Information Flow to the Pocket PC 2002

Resco's new role as e-integrator includes ensuring that a company's existing ERP and CRM systems be incorporated with the possibility of transmitting sound and moving pictures directly to Microsoft's new Pocket PC 2002. Those concerned by this solution are primarily the banking and finance sectors, news agencies, and companies that have a strong need to receive news rapidly.

Resco develops and integrates services for mobile units such as the Pocket PC 2002. Users of Pocket PCs who are permanently connected are provided with the opportunity to receive important information in real time via a simple and user-friendly interface, which in addition can adapt incoming data to each relevant business.

 "We are committed to helping our customers receive the right information at the right time via any device," says VP Hans Lycke at Resco AB.

"Pocket PC 2002 has a great advantage in the marketplace, because it is designed to be the most connected and expandable PDA available," says Chris Hill, product manager of the Mobility Division at Microsoft Corp. "We are pleased that Resco is taking advantage of the new feature-functionalities of the Pocket PC 2002 by integrating ERP and CRM systems with live streaming information directly to the Pocket PC 2002 software."
