BlueLabs becomes development partner to Free2Move

BlueLabs and Free2Move have signed a cooperation agreement in Bluetooth wireless communication. As a result, BlueLabs will develop customer applications and modifications for products in Free2Move's portfolio.

Free2Move's products include a serial port plug that uses Bluetooth to make PC's and other electronic units wireless and a Bluetooth-based LAN access point. BlueLabs, which develops Bluetooth applications, has extensive experience in development projects in both telecom and product-development industry.

"By cooperating with BlueLabs, we can provide complete solutions to the market," says Per-Arne Wiberg, President of Free2Move. "We selected BlueLabs as a partner because of its high level of competence and experience in the development of high-technology systems."

"By cooperating with Free2Move, we can cut development times in our projects by utilizing fully developed technology," says Otto Lilja, Bluetooth Project Manager at BlueLabs. "We anticipate great potential in the development of Bluetooth-based systems and are now beginning to see many interesting Bluetooth products. In particular, we can expect to see many new Bluetooth applications in the industrial sector in the near future."

Interest in the products Free2Move has developed to date is great and they are being used in a number of customer applications, as evident at this week's Scandinavian Technical Fair in Stockholm.
