TrustLink and Software Data offer mobile business applications to field service technicians and sales professionals

TrustLink and Software Data have joined forces in order to provide field service technicians and sales professionals with mobile business applications based on Pocket PC, Palm OS, and Symbian OS. The mobile solutions will build upon Software Data's service management system ePort. The cooperation agreement involves the licensing of a mobile application suite provided by TrustLink that will be fully integrated with the ePort product and branded ePort Mobile.

"Software Data has established itself as one of the leading providers of service management systems to large organisations in Scandinavia and Germany, and is therefore a natural and very attractive partner", says Mats Bergström, MD, TrustLink AB.

"TrustLink and Software Data will soon bring to the market mobile solutions that make the most of today's technology. Field service technicians will be equipped with a powerful tool that is secure and user friendly, which allows them to improve the quality of services. With TrustLink as a technology partner we are able to focus on the needs of our clients, and quickly meet those needs.", says Arild Andersen, CEO, Software Data AS.
