

Telelogic strengthens relationship with telecom vendor through add-on license sale

Major telecom vendor expands global use of Telelogic Synergy for configuration and change management

MALMÖ, Sweden – December 12, 2001 – Telelogic (Stockholm Exchange: TLOG), the leading global provider of solutions for advanced software and systems development, today announced a new license and maintenance agreement with a major Nordic telecom vendor. The agreement, worth more than US\$1 million, provides licenses for Telelogic Synergy in the customer's global development organization. Approximately 50 percent of the agreement will be accounted for in 2001; the remainder will be accrued in the first half of 2002.

The agreement extends the customer's installed base of Telelogic Synergy for configuration and change management. With Telelogic Synergy, the customer has a best-in class tool for version control and change during the software development process.

"This agreement demonstrates confidence in the superior capabilities of our products, such as scalability and support for geographically distributed development teams," said Anders Lidbeck, president and CEO for Telelogic. "Companies today face parallel projects of increasing size and complexity. It is critical to have a well-structured development process that tracks different versions of the software and automatically updates the system and implements changes," Lidbeck continued. "This is where our powerful Telelogic Synergy products offer substantial value."

About Telelogic

Founded in 1983, Telelogic® (www.telelogic.com) is the leading global provider of solutions for advanced software and systems development. The company's automated application lifecycle solution includes integrated best-in-class software and professional services for requirements management, change and configuration management, development, testing, and documentation. Telelogic enables organizations to improve quality and predictability, while reducing time-to-market and overall costs in software and systems development. Built on an open architecture that ensures interoperability with other leading third-party solutions, Telelogic's products are based on international standardized languages and notations. Telelogic participates in 3GPP, Bluetooth SIG and OMG to create future communication technologies and visual software development languages.

Headquartered in Malmö, Sweden the company has more than 1,000 employees worldwide. Customers include Airbus, Alcatel, BMW, Boeing, BT, DaimlerChrysler, Deutsche Bank, Ericsson, Lockheed Martin, Lucent Technologies, Motorola, NEC, Nokia, Philips and Siemens.
