AU-SYSTEM HELPS DEVELOP OPERATIONS SUPPORT SYSTEM FOR SKANOVA

Stockholm, Sweden – 30 January 2002 – AU-System has been commissioned to develop parts of network operator Skanova's Operations Support System (OSS). The commission will involve AU-System adapting and integrating the parts of the system that use automated fault correction to prevent and solve various types of operation and supply problems.

Automated operation and monitoring processes are becoming increasingly important for operators as the introduction of new services accelerates. This in turn places larger demands on the systems in the form of openness and flexibility to ensure operational and service quality.

"This new commission will bring about even closer collaboration with Skanova," comments Lars Andersson, CTO OSS Solutions at AU-System. "Skanova is a long way ahead in the way it exploits new technology to supply network capacity and infrastructure, so it's a very stimulating company to work with."

Skanova, which is part of the Telia group, operates and develops Sweden's biggest network for telephony, internet and broadband services. The company's aim is to offer capacity and infrastructure to operators and service providers in Sweden.

AU-System is now the leading integrator of network operations support systems in the Nordic countries. Other reference customers include Telia, Europolitan, Vodafone, Telenor, Banverket Telekom and Bredbandsbolaget.
