BlueLabs and Osix enter strategic cooperation

BlueLabs and Osix have entered into a strategic cooperation on integrated solutions for Revenue Assurance, Billing and Fraud Management. The cooperation also comprises a system for load generation and testing of products for 3G networks.

BlueLabs has 20 years of experience in the development, testing and integration of technologically advanced solutions for the telecom industry, while Osix is a leading software provider of systems for Fraud, Customer Care, Billing and Quality of Service.

Osix and BlueLabs have complementary experience in development and integration that will facilitate the effective development of products and services for operators and product suppliers in the telecom industry.

"BlueLabs has extensive experience in the development of services and applications and Osix offers market-leading products for CDR generation and surveillance. Together, we will be able to offer cost-effective solutions based on standardized products," says Martin Jonasson, Business Area Manager at BlueLabs.

"Through this cooperation, we can offer the market high-quality solutions adapted to customer needs," says Christer Holmberg, Business Development Director at Osix.
